

Do you see trees being strangled or smothered by non-native, invasive vines?

**BECOME
A TREE
RESCUER**

**HELP
SAVE OUR
TREES!**

Note: Virginia native vines feed the birds and don't hurt the trees

TREES

Sign Up to Rescue Trees!

Would you like to help save more of our native trees? Most of our neighbors have no idea that the invasive vines on their trees may eventually kill them and potentially make the trees hazardous. You can help your community by walking around to **spot these trees** and to **drop off a brochure** to alert the landowners.

Please see our website for details and to sign up to be a Tree Rescuer. The web page explains

- How to survey your community for trees at risk
- How to recognize invasive (versus harmless native) vines
- What resources are available to help you work with your community.
